

5 levels of discussion

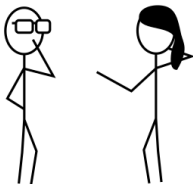

Level 1 - I want to learn.

Why do you think the earth is round?

Because the sun casts longer shadows at noon, the farther from equator you get, which means the earth have to be round.

But why don't people fall of, on the other side of the Earth?

I don't know, maybe gravity?

Level 2 - I want to be right!

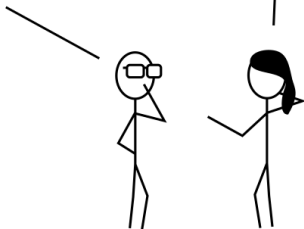

The Earth is Flat.

| *But the sun casts longer shadows at...*

*Are you sure, you have
measured correctly?*

| *I had multiple people measure it multiple times,
with the same results.*

| *Are you sure, those
people are trustworthy?*

Level 3 - I want to win!

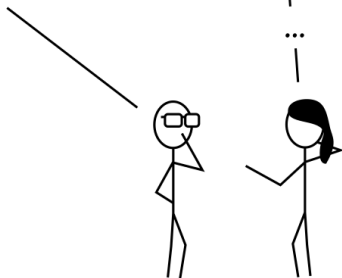

The Earth is Flat.

But the sun casts longer shadows at...

The Earth is Flat!

You are repeating yourself.

The Earth is Flat!

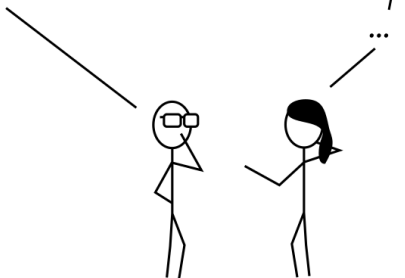

Level 4 - I want you to lose!

Everyone who thinks, the earth is not Flat, is a moron.

| But the sun casts longer shadows at...

How can I trust your measurement,
when you are a moron?

Level 5 - I want you destroyed!

*So what you are saying is, that at noon
Europeans have longer shadows than Africans?*

Yes!

*You are a racist, since you
think that Africans have
inferior shadows to Europeans!*

Wait what?
